

AMC GORILLA GRIP™

Lubricants & Cutting Oils

IMDEX™

Description

GORILLA GRIP™ is a tenacious, barium-based grease recommended for use on diamond drill rods to reduce vibration and friction between the rod and casing or rock strata.

Application

GORILLA GRIP™ is particularly effective in dry hole drilling, is thermally stable and will perform in a variety of harsh conditions. GORILLA GRIP™ has excellent adhesion characteristics designed to provide exceptional film strength when subjected to extreme down hole pressures.

GORILLA GRIP™ is easily applied to the outside surface of the drill pipe prior to inserting into the hole. Heat is not required to soften the product before use.

Recommended Treatment

Under normal drilling conditions:

N rods Initially apply 1 – 2kg grease for 100m

As the hole greases up use less after each bit change.

Dry hole conditions:

N size rods 1 – 3kg grease per 100m

H size rods 2 – 4kg grease per 100m

P size rods 3 – 5kg grease per 100m

Hole conditions will vary, and grease application should be adjusted accordingly.

Please Note: Several factors will dictate the most appropriate concentration rate. Please contact your nearest AMC representative for optimum results.

Advantages

- Reduces rotational torque and vibration in dry holes
- Protects metals surfaces
- Adheres to the rod under virtually any conditions
- Resistant to hard, saline water
- Thermally stable, extreme pressure resistance
- Can be applied to wet surfaces

Typical Physical Properties

Appearance:	Light tan stringy
NLGI grade	3
Thickener type:	Barium complex
